Calculate the magnetic field of bending magnet

Zhen Wang

Wednesday 12th November, 2014*

According to

$$Bqv = \frac{mv^2}{r} \tag{1}$$

$$E_k = \frac{1}{2}mv^2 = Uq \tag{2}$$

we can deduce

$$B = \frac{\sqrt{2}}{r}\sqrt{\frac{m}{q}}\sqrt{U}, \qquad \mathrm{q} > 0 \tag{3}$$

If $q < 0$, $U < 0$ and B has an opposite sign compared to the condition of $q > 0$.
If units are given:

$$U : [\mathrm{kV}], \qquad 1\,\mathrm{kV} = 10^3\,\mathrm{V} \tag{4}$$

$$m : [\mathrm{amu}], \qquad 1\,\mathrm{amu} = 1.67 \times 10^{-27}\,\mathrm{kg} \tag{5}$$

$$q : [\mathrm{e}], \qquad 1\,\mathrm{e} = 1.6 \times 10^{-19}\,\mathrm{C} \tag{6}$$

$$r : [\mathrm{cm}], \qquad 1\,\mathrm{cm} = 10^{-2}\,\mathrm{m} \tag{7}$$

$$B[\mathrm{T}] = \frac{\sqrt{2}}{r[\mathrm{cm}]10^{-2}}\sqrt{\frac{m[\mathrm{amu}]}{q[\mathrm{e}]}}\sqrt{\frac{1.67 \times 10^{-27}}{1.6 \times 10^{-19}}}\sqrt{U[\mathrm{kV}]}10^{\frac{3}{2}} = \frac{0.457}{r[\mathrm{cm}]}\sqrt{\frac{m[\mathrm{amu}]}{q[\mathrm{e}]}}\sqrt{U[\mathrm{kV}]}, \qquad \mathrm{q} > 0 \tag{8}$$
